# HOW MY REHAB PRO IMPROVES *patient compliance to home exercise therapy*

## **STEP 1: Video Library**

Enter our professional and continually growing HD video library. Customize and edit video text and titles if you choose. Search by body part and/or search bar for specific exercises. Save your frequently used exercise videos as favorites to “My Saved Videos”.

## **Step 2: Manage Routines**

Use our extensive HD video library and your “My Saved Videos” to create routines or protocols. Simply edit, customize and create routines or protocols that you would regularly prescribe.

## **STEP 3: Your Patient “Welcome to your road to recovery” email**

Enter your patient’s name and injury type into your personal PT dashboard where your patient will automatically receive a “Welcome email” with your clinic name welcoming them to their “road to recovery.” Your patient will also be granted access to recommended products for any injury type, as well as the option to download the FREE Apple or Android My Rehab Pro app.

## **STEP 4: Prescribe Patient Exercise Program Options (Create Prescription)**

Now just create a prescription of selected exercise videos with a simple drag and drop and enter the sets and reps. Then with just a click, print and/or email your patient, allowing them to access their detailed video exercises through a video link and/or patient access code. Your patient will have multiple options to view their prescribed exercises from professional printed handouts, home desktop computer, laptop, tablet, smart phone, or FREE app.
